

Amendments to the Claims

1. (Original) An electronic display device comprising:
a housing;
a display area provided within the housing to display content for a user;
memory within the housing to hold data that is to be rendered into user-viewable content;
an electrophotographic assembly within the housing configured to electrophotographically render user-viewable content from the data that is held in the memory;
a loop of material disposed proximate the electrophotographic assembly and configured to receive electrophotographically rendered content and present the content for user viewing within the display area; and
a control area on the housing comprising one or more user-engagable structures to permit a user to interact with the device, the control area being positioned on the housing to accommodate one-handed use of the device.
2. (Original) The electronic display device of claim 1, wherein the loop of material comprises a dielectric material.
3. (Original) The electronic display device of claim 1 further comprising a power source internally of the housing.
4. (Original) The electronic display device of claim 3, wherein the power source comprises one or more batteries.
5. (Original) An electronic display device comprising:
a housing;
a display area provided within the housing to display content for a user;
memory within the housing to hold data that is to be rendered into user-viewable content;

an electrophotographic assembly within the housing configured to electrophotographically render user-viewable content from the data that is held in the memory, the content being renderable by the assembly at at least 300 dpi;

a loop of material disposed proximate the electrophotographic assembly and configured to receive electrophotographically rendered content and present the content for user viewing within the display area; and

a control area on the housing comprising one or more user-engagable structures to permit a user to interact with the device, the control area being positioned on the housing to accommodate one-handed use of the device.

6. (Original) The electronic display device of claim 5, wherein the assembly is configured to render the content at 600 dpi.

7. (Currently Amended) The electronic display device of claim 5, wherein the assembly is configured to render the content at 600 dpi, and the device weighs weights no more than two pounds.

8-9. (Canceled)
